

## NOTES TO USERS

This map is used in administering the National Flood Insurance Program. It does not represent a zoning map or a cadastral map, but rather identifies flood drainage sources of small size. The community map repository should be consulted for the most up-to-date flood hazard information.

To obtain additional information concerning Base Flood Elevations (BFEs) and/or Floodways, users are encouraged to consult the Flood Insurance Study (FIS) report that accompanied the panel. This FIS report may be available at no cost from the community map repository. These BFEs are intended for flood insurance purposes only and should not be used as the sole source of flood elevation information. The FIRM panel and the FIS report should be utilized in conjunction with the FIRM panel.

Coastal Base Flood Elevations shown on the map apply only landward of 0.07 North American Vertical Datum of 1988 (NAVD 88). Users of FIRM panels should use local flood elevation data provided in the Summary of Subarea Elevation table in the Flood Insurance Study report for their community. The Summary of Subarea Elevation table should be used for construction and floodplain management purposes when the panel is used in conjunction with the FIS report.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations and were developed using the National Flood Insurance Program's floodway widths and other pertinent floodway data as provided in the Flood Insurance Study report.

Certain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control measures for this jurisdiction.

The projection used in the preparation of this panel was NAD 1983 StatePlane Louisiana FIPS 2. The projection datum was NAD 1983 StatePlane Louisiana FIPS 2. The height datum was NAD 1983 Vertical Datum. The ellipsoid difference in datum, projected or State Plane zones, is approximately 0.000 feet. There are minor differences in the vertical position differences in map features across jurisdiction boundaries.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground surface elevations to determine if a structure is subject to flooding. For further information on the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov>, or contact the National Geodetic Survey at the telephone address:

National Geodetic Survey  
NOAA/NSS/NGS  
National Geodetic Survey  
800 New Jersey Avenue, NW  
1315 East-West Highway  
Silver Spring, Maryland 20910  
Telephone: 301-937-2282

To obtain current elevation descriptions and/or location information for bench marks shown on this map, contact the Information Services Branch of the National Geodetic Survey at the telephone address above or at <http://www.ngs.noaa.gov>.

Base flood information for this study was provided in digital format by the USACE. The base flood elevation data was created in StatePlane NAD 1983 Coordinates, U.S. Survey Feet and was produced at scale 1:20,000 (1"=400'). Actual panel scale is 1:20,000 (1"=400').

This map reflects more detailed and up-to-date stream channel configurations than those shown on the previous FIRM for this jurisdiction. The doyleans and the stream channel configurations shown on this panel have been adjusted to conform to these new stream channel configurations. As a result, the base flood elevations shown on this panel may differ from the previous Study report (which contains authoritative hydrologic data) and reflect stream channel configurations as they exist at the time of publication.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may occur after the date of publication, users are encouraged to contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed Map Index for an overview map of the community showing the location of the panel and the panel numbers, addresses, and a listing of communities table containing National Flood Insurance Program data for this jurisdiction, as well as a listing of the parishes on which each community is located.

Contact the FEMA Map Service Center at 1-800-355-0616 for information on the latest version of the Map Index or the National Flood Insurance Program.

If you have questions about this map or questions concerning the National Flood Insurance Program in general, please call 1-877-FLOOD MAP (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov/nfip/index.cfm>.

Accident Letter Notes to Users: Check with your local Community to obtain more information on accident letters. If you have an accident letter, it will indicate the 1 percent annual chance level and the Emergency Action Plan, or the levee system(s) that protects your property. If you have an accident letter, you and your insurance agent, property owners and residents are encouraged to consider flood insurance options. For more information on accident letters and the National Flood Insurance Program, interested parties should visit the FEMA Website at <http://www.fema.gov/nfip/index.cfm>.

For community map revision history prior to countywide mapping, refer to the Community Map History page located in the Flood Insurance Study report for this jurisdiction.

To obtain a copy of the community map revision history for your insurance agent or call the National Flood Insurance Program at 1-800-658-0200.

## LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION DUE TO ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The special flood hazard areas are the areas where there is a 1% chance of flooding in any given year. The base flood is the water-surface elevation of the 1% annual chance flood.

ZONE A No base flood elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); base flood elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of uniform flow, flooding velocities are determined.

ZONE AP Special flood hazard areas predicted from the 1% annual chance flood elevations determined. Zone AP indicates that the flood control system is predicted to provide protection against flooding in these areas.

ZONE AR Area to be protected from 1% annual chance flood by a federal flood protection system under construction, or a state flood protection system.

ZONE V Coastal flood zone with velocity hazard (wave action); no base flood elevations determined.

ZONE VE Coastal flood zone with velocity hazard (wave action); base flood elevations determined.

**FLOODWAY AREAS IN ZONE AE**

The floodway is the channel of a stream plus any adjacent floodplain areas that must be left free of encroachment so that the 1% annual chance flood can be carried without significant reduction in its peak discharge or velocity.

**OTHER FLOOD AREAS**

Area of 0.2% annual chance flood; area of 1% annual chance flood with average depths of less than 1 foot and/or drainage areas less than 1 square mile, and areas predicted by known or 1% annual chance flood.

**OTHER AREAS**

Area determined to be outside the 0.2% annual chance flood.

Areas of known flood hazards are understood, but possible.

**COASTAL BARRIER RESOURCE SYSTEM (CBRS) AREAS**

**OTHERWISE PROTECTED AREAS (OPAs)**

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

• Flood Boundary

— Zone boundaries

— Base flood elevations, flood depths or flood velocities.

— S12 — Flood elevation line and value; elevation in feet (EL) (SLT)

— (EL) — Flood elevation line value where within zone boundary.

\* Referenced to the North American Vertical Datum of 1988 (NAVD 88).

— (A) — Cross slope line.

— (B) — Geodetic coordinates referenced to the North American Vertical Datum of 1988 (NAVD 88).

— (C) — 100-meter Universal Transverse Mercator grid line, zone 15 (UTM).

— 6000000 FT — 300-foot easting and 300-foot northing.

DX5510 — Bench mark (see explanation in Notes to users section of this FIRM panel).

● M15 — River Mile.

— RIVER MILE

Refer to Map Production for use on Index.

EFFECTIVE DATE OF COUNTYWIDE FLOOD INSURANCE RATE MAP

11/01/2010

EFFECTIVE DATE(S) OF REVISION(S) TO THIS PANEL

None

For community map revision history prior to countywide mapping, refer to the Community Map History page located in the Flood Insurance Study report for this jurisdiction.

To obtain a copy of the community map revision history for your insurance agent or call the National Flood Insurance Program at 1-800-658-0200.
